Design D handoff: my.cytron.io revamp

Oct 15, 2026 · @Cytron

Overview

Design D is the approved design for the my.cytron.io revamp: the current page structure and content, section by section, in an updated look with orange call-to-action buttons. Marketing chose it on 12 Oct 2026 and confirmed it for the build on 15 Oct; IT should build the four page types below from it.

The mockups are static HTML, marked `noindex, nofollow`, and are not the live site. Nothing is wired to the store: carts, forms and prices are placeholders copied from the live site.

Resource	Link
Live mockup (Store homepage)	marketingcytron.github.io/Cytron-Website-Restructure
Current site vs Design D, side by side	compare.html
Source files and README	GitHub: MarketingCytron/Cytron-Website-Restructure
Earlier options, not chosen	archive/

Pages and sections

Four page types, each keeping the live page's sections in the same order. All four share the header (audience bar, menu, search, cart) and the footer.

Mockup file	Replaces	Sections, top to bottom
index.html	my.cytron.io (Store)	Hero slider (7 slides); 4 promo cards (RBT, REKA:BIT RBT, Free Shipping, LO/PO); Top Learning Education Kits; Latest Tutorial; Weekly Best Sellers; Maker's Selection; Our Training Partner (logos); Our Top Brands (logos); We Do Offer

Mockup file	Replaces	Sections, top to bottom
education.html	my.cytron.io/education	Welcome Makers banner; Top Learning Education Kits; Which STEM Kits Are Best for Beginners? (levels); Which Platform Is Best for Your STEM Project?; Looking for Tutorials, Videos, or Resource Hub?; Competitions or Certification Programs; Join Our Community
industry.html	my.cytron.io/raspberry-pi-for-industry	Hero video; trust badges; Certified. Low Cost. Powerful. Production-Ready.; Why Raspberry Pi; Your Bridge Between Raspberry Pi and Industrial Control; Why IRIV; IRIV Product Family; Industry Feedback; Use Cases & Success Stories; Explore Industrial Products; Meet & Greet session; Articles; Design and Customization Service; newsletter sign-up
product.html	p-maker-esp32-bundle (template)	Breadcrumb; gallery with video + buy box (rating, code, price range, bundle options, availability, quantity, Add to Cart, Explore More, accessories); main column: Description, Features, Specification, Packing List, Resources, Related Tutorials, You May Also Need, Reviews; side column: Recently Viewed, New Arrivals, Stock Clearance

The product page is a template: the Maker ESP32 Bundle is only the example product. Every product page should follow the same layout.

Design tokens

One Cytron blue from the letterhead, warm greys, white, and one orange for actions. Tokens are CSS custom properties on `:root` in `site.css`, plus `--cta` in `design-d.css`.

Token	Value	Use
`--cta`	#E8590C	Orange call-to-action buttons

Token	Value	Use
`--cta-hover`	#C2410C	Hover on orange buttons
`--brand`	#00A4DB	Cytron blue: top bar, lines, dots, icons, card hover border
`--primary`	#007DAA	Links, secondary buttons, prices, eyebrows (white text 4.8:1)
`--primary-hover`	#00698F	Hover on blue buttons and links
`--ink`	#3C3C3B	Headings, product names
`--text`	#4A4A49	Body text
`--muted`	#6D6D6C	Secondary text, footer links
`--line`	#E4E7E9	Borders, dividers
`--soft`	#F7FBFD	Tinted sections and the product buy box panel (never behind product photos)
`--tint`	#DFF4FA	Light blue highlight

Type: Roboto throughout (self-hosted WOFF2: 400, 500, 600–900), fallback Segoe UI, system-ui.

Style	Size / line height	Weight	Notes
Hero headline	46 / 52px	700	`--ink`
Section title (h2)	23.25 / 38px	700	
Eyebrow label	12.5–14px	500	Uppercase, letter-spacing about 0.12em, `--primary`
Body	15.5 / 25px	400	`--text`
Menu items, buttons	15px	500	
Product name in cards	14px	500	Clamped to 2 lines
Card price	15px	700	Old price struck through at 13px, `--muted`
Footer links	13.5px	500	`--muted`

Spacing and shape: content width 1240px with 24px side padding (`--wrap` , `--g`). Sections are 72px apart (40px for the first). Tinted sections use 64px top and 72px bottom padding. Cards have an 8px radius (`--r`) and a 1px `--line` border; buttons have a 4px radius and are 46px tall (38px for small ones). The header has a 5px `--brand` bar across the top.

Components

A small set of components covers all four pages. Class names below are the ones in the mockup CSS.

Component	Where	Spec
Header (`.hdr`)	All pages	White, 5px `--brand` top bar. Row 1: audience pills (Store / Industry / Education, active pill filled `--primary`), country, Account. Row 2: logo, Products (mega-menu), Tutorials, Shop By, Promotions, search field, personalisation icon, cart
Primary button (`.btn--primary`)	Main action in each block	Orange `--cta` , white 15px text, 46px tall, 4px radius; hover `--cta-hover` . Labels: Shop Now, Order Now, Get Quote Now, Learn More, Find Your Level, Book Your Slot Now, Submit, Add to Cart
Secondary button (`.btn--outline`)	Next to a primary	White, 1px `--primary` border and text; fills blue on hover. Small variant (`.btn--sm`) is 38px tall
Hero slider (`.hero`)	Store	Eyebrow, headline, one line of copy, primary + secondary button, product image on the right; progress bars below
Promo card (`.d-promo`)	Store	White card, 1px `--line` border, with eyebrow, title, short copy and image, 4 across

Component	Where	Spec
Product card (`.d-pc`)	Product rows	Square white image well (16px padding), name (2 lines max), price; hover: `--brand` border, soft shadow, image zooms 4%
Tutorial card (`.d-tc`)	Tutorial and article rows	16:9 cover image, title (2 lines max), meta line (date, category)
Carousel (`.d-car`)	Product, tutorial and logo rows	Horizontal track with prev/next arrows beside the section title and a thin progress bar; 5 cards per view at full width
Logo tile (`.d-logo`)	Partners, brands	Square white tile, 1px border, logo contained
Section header (`.d-head`)	Every section	h2 on the left; "View More" link and carousel arrows on the right
Audience chooser (`#welcome`)	Opened from the personalisation icon	Dialog with two options (Education, Industry / Enterprise) and "Continue as Guest"
Footer	All pages	Columns: Support, About, Resources, Follow Us; 13.5px `--muted` links. On phones (600px and below) each column becomes a tap-to-open section with an uppercase heading and a chevron, like the live site's mobile footer
Buy box (`.pd-top`)	Product	Title, rating, brand, code, warranty, price range in `--primary`, bundle option pills, availability, quantity stepper, Add to Cart + Explore More, "Accessories you may need" with small Add to Cart buttons
Gallery	Product	Large white stage (video first, then photos) with a thumbnail strip and arrows

Behaviour

All interaction is plain JavaScript in three files (`site.js` , `design-d.js` , `pdp.js`); IT can re-implement it in the store's own framework.

Feature	Behaviour
Hero slider	Auto-advances every 6 seconds with progress bars; pauses on hover and keyboard focus
Carousels	Arrows page by one full view; arrows disable at the ends; the progress bar shows position; touch and trackpad scrolling work natively
Menus	Mega-menu and Shop By open on hover, keyboard focus or click, and close on outside click or Escape. Below 1100px the burger menu replaces them, with tap-to-open dropdowns. At 600px and below the footer columns start closed and open independently on tap (aria-expanded on each heading button)
Audience chooser	The personalisation icon opens the dialog. Picking Education or Industry saves the choice (`localStorage` key `cytron_audience`) and goes to that page; "Continue as Guest" returns to Store. Focus stays inside the dialog; Escape closes it
Industry hero video	Autoplays muted with a Pause / Play button; does not autoplay when the visitor prefers reduced motion
Product gallery	First tile is the YouTube video (loads only when clicked); thumbnails switch the image; arrows scroll the strip
Bundle picker	Choosing a bundle updates price, product code, stock state and main image. An out-of-stock bundle is shown struck through; Add to Cart turns grey and disabled
Quantity	Minus / plus buttons; minimum 1
Read More / See More	Long Description, Features and Packing List blocks are clipped with Read More / Read Less; See More reveals more product cards

Feature	Behaviour
Add to Cart	In the mockup it only shows a toast ("Mockup only. Nothing was added to a cart."); IT wires it to the real cart
Hover	Cards: `--brand` border, soft shadow, 4% image zoom. Buttons: darker fill. Transitions, animation and smooth scrolling are turned off under `prefers-reduced-motion`

Responsive breakpoints

Designed at 1440px desktop and 390px phone; four main breakpoints, all `max-width`. Test the review build at 1440, 1100, 900, 600 and 390px.

Width	What changes
Above 1280px	Full layout: 5 product cards per carousel view, 8 logos
⩽ 1280px	Search field narrows to 200px; 7 logos per view
⩽ 1100px	Burger menu replaces the main menu; search becomes an icon; carousels show 4 cards (3 for 3/4-up rows), 6 logos; promo cards, value points and footer go 2 columns. Product: reviews list goes 1 column
⩽ 900px	Carousels 3 cards (2 for 3/4-up rows), 5 logos; banners stack image under text; trust badges 2 columns. Product: buy box stacks under the gallery, side column (Recently Viewed, New Arrivals, Stock Clearance) is hidden, related grid goes 3 across
⩽ 600px	Sections 56px apart; carousels show 2.15 cards so the next one peeks (logos 3.5) and the arrows hide (swipe instead); promo cards and value points go 1 column; footer columns fold into tap-to-open sections. Product: title 24px, price 28px, related grid 2 across

The header also tightens at 1320 and 1240px (smaller menu gaps, then fewer header links), and the product page tightens its columns at 1180px.

Content, images and data

All words, products and images come from the live site, copied in October 2026, and no prices or facts were invented. One deliberate change: the 7 Store hero slides are rebuilt as live text plus a product photo, instead of banner images with the text baked in, carrying the same messages. In the build, everything that changes should come from the store system, not from the mockup files.

Item	In the mockup	In the build
Text and section order	Copied from the live pages	Keep as is; Marketing edits it in the CMS as today
Products, prices, stock, ratings	Typed into the HTML	From the catalogue: price ranges, sale prices, stock state, rating count
Images	Loaded from the live image cache, `static.cytron.io/image/cache/...-WxH.png`, which resizes on request	Same cache; ask for the size the slot needs (the mockup uses 268x268 for product cards)
Product photos	White catalogue backgrounds, shown on white #FFFFFF on every page: product cards, promo cards, menu promo, chooser, gallery, accessories and side lists	Show product photos on white, as the mockup does
Video	YouTube embed (no-cookie domain), loaded only on click	Same
Forms (newsletter, search)	Newsletter does not submit; search posts to the live `my.cytron.io/search`	Wire to the real endpoints
Cart, wishlist, compare	Toast message only	Real cart and account actions

One image on the live product page was renamed during this work (`maker-esp32-telegram-banner.png`); the mockup now uses the new name. Broken image links are worth checking in the build too.

Accessibility

The mockup aims at WCAG 2.1 AA, with one known gap: white text on the bright orange `#E8590C` measures about 3.6:1, below the 4.5:1 needed for 15px text. Marketing chose the brighter orange on purpose; if the build must pass AA, change `--cta` to `#CF4A0B` (4.5:1), a deeper orange.

- **Contrast:** body `#4A4A49` and links `#007DAA` on white pass AA (white on `#007DAA` is 4.8:1).
- **Keyboard:** skip link to the content; menus open on focus; the chooser dialog keeps focus inside and closes with Escape; orange buttons show a 2px orange focus ring.
- **Labels:** carousel arrows, icon buttons and the video button have text or `aria-label`; the page language is `en`.
- **Images:** product and tutorial images use empty `alt` because the product or article name is printed next to them. Logos, banners and the Industry testimonial images should get real alt text from the CMS.
- **Motion:** the Industry video has a Pause button and does not autoplay under reduced motion; the hero slider pauses on hover and focus.
- **Targets:** buttons are 46px tall (38px small), well above the 24px minimum.

Files

The repository holds only Design D at the top level; it needs no build step and runs on any static server (`python3 -m http.server`). Its README repeats the file map and tokens.

File	Holds
`index.html`, `education.html`, `industry.html`, `product.html`	The four pages
`site.css`	Base: tokens, fonts, header, menus, footer, buttons, cards, chooser. Shared with an earlier option, so it has some rules Design D does not use
`design-d.css`	Design D layer: sections, carousels, banners, logos, orange CTA
`pdp.css`	Product page
`site.js`, `design-d.js`, `pdp.js`	Behaviour, as in the Behaviour section
`fonts/`	Roboto 400, 500, 600–900 (Latin subset WOFF2, about 9 KB each)

File	Holds
`compare.html`, `compare/`	Review page: live site screenshots (12 Oct 2026) next to Design D. Not part of the build
`archive/`	Design C and Design E, the options not chosen. Reference only, not maintained

Open items

Six decisions are still open; none blocks IT from starting on the layout and components.

- [ ] Orange shade: keep the bright `#E8590C` or switch to the AA-passing `#CF4A0B` (Marketing with IT).
- [ ] Header: keep both the audience pills and the personalisation icon, as the live site does, or only one.
- [ ] Hero slides: confirm Marketing can manage them as text plus product photo in the CMS, rather than as banner images.
- [ ] Arduino VENTUNO Q slide: add its price once the product page shows a reliable one (the mockup leaves it out).
- [ ] Product template: confirm how it looks for products with no bundle options or no video.
- [ ] Alt text: supply it for logos, banners and testimonial images.

Two live-site bugs seen while comparing are fixed in Design D: at 390px the live mobile header shows desktop menu links over the search bar, and the live mobile Education page does not show its Welcome Makers banner.
